PULL IT ALL TOGETHER

From forest to fireplace, Wallenstein provides heavy duty equipment that's ready for all your woodlot needs.

WALLENSTEIN FX SKIDDING WINCH

YOU'VE GOT PULL.

WALLENSTEIN FX SKIDDING WINCH

Managing the full potential of your forest is easy with the pulling strength of Wallenstein's FX Skidding Winch. You can now reach the trees you need to cut, even on steep hills or swampland without the need for large heavy equipment. The FX Skidding Winch is the ideal tractor attachment for gathering firewood, clearing dead trees and harvesting premium lumber all while preserving your woodlot.

With pulling power up to 12,000 lbs.* and cable length of 165 feet, the FX Skidding Winch is designed for your woodlot. The entire winch system is easy-to-use with many features built for rugged durability and practical operation.

Using a skidding winch is also easier on your tractor by transferring the pulling strain onto the ground with the large blade that anchors the winch.

Optional
Choker
Chain

The Wallenstein FX Skidding Winch comes in three sizes to suit your tractor. Get more out of your woodlot with the Wallenstein FX Skidding Winch without the wear and tear on you, your woodlot or your tractor.

SNATCHBLOCK PULLEY SYSTEM

The winch cable runs through an upper and lower snatchblock on all FX models for a more efficient and safer pull. The top pulley provides a high entry point, forcing down-pressure onto the blade and lifting the logs. The lower pivoting snatchblock keeps the weight low, especially important for smaller tractors. On the larger models, the lower snatchblock is vertically adjustable for the perfect balance of efficiency and lift.

REMOVABLE CLUTCH ASSEMBLY

The clutch assembly transfers power from your tractor's PTO into powerful winching action that's ready to pull 12,000 lbs.* up the steepest hill. The entire clutch assembly is also easily removable for servicing.

* FX120 model only

KEYHOLE SLIDERS

At the end of the winch cable are three keyhole sliders that slide along the cable. Keyhole sliders and choker chains are ideal for winching multiple logs together, saving you time and energy. Each chained log is attached to a keyhole slider which gathers together as you began to winch.

SAFETY SCREEN

All FX skidding winches come standard with a safety screen for optimal operator and tractor protection.

>>>

SKIDDING

The sturdy towing bar secures multiple chained logs for safe traveling out of the forest.
